Price quotes as model elements: unit prices derived, not typed

Created 2026-10-07 20:14 CEST

Scope and estimate. The halfarm procurement lines carry a typed net unit price; where the shop showed a gross price, a pack price or several components, the arithmetic was done by hand and only a note remains. User decision 2026-10-07 20:11: prices must come from the model, so that every table is a view of it. ETA 2–3 hours. No benchmark.

Semantics. `data/sysml/meta_sysml_structure.hymeko` gains element kinds `price_quote` (what the source shows: `amount`, `currency` → currency, `vat_included` – the VAT rate contained in `amount`, 0 when the shown price is net –, `pack` – units the amount buys –, `source`, `date`, `quote_text`) and `currency` (`rate`: home-currency units per unit), and the edge `priced_by` (+ price_quote, − product | product_candidate; field `per_unit`: packs per item unit). Net home-currency unit price = $\sum$ `per_unit` · `amount`/(1 + `vat_included`)/`pack` · `rate`. An item priced by quotes carries no typed price.

Ownership. Transformation: the vocabulary additions, the structure witness and one test; no engine change. Consumer: quotes and currencies in the model; one pricing module used by every view (workbook with a sources sheet, requirement check, decision evaluation, model tests).

Tests. Witness: quote, currency and `priced_by` resolve with fields and roles. Consumer: the derived prices reproduce today's typed ones where both exist (difference only from the recorded VAT and pack); model tests – an item has quotes or a typed price, never both; every quote has a source and a date; typed prices are listed as not yet traceable. Counter-tests: a removed quote, a changed VAT rate, a doubled price source.

Budget and risks. Linear in quotes (about 60). Risk: VAT status not printed by a shop – recorded as `vat_included 0` with the quote text, and named in the report.

State and rollback. `feat/material-lobes`, uncommitted; other workers' files untouched; no git writes from the sandbox. Rollback: remove the three vocabulary lines and the test.
